

## Purpose and Procedure

Jaqueline M.  
Section 18.

The purpose of this lab was to be able to help us understand how to use density in order to be able to find the answers of different mass, volume, and density using the temperature. It's also a way to see how we can use the different measuring devices to apply in the density equation and get our answer.

In the procedure we are asked to weight different objects in order to get a good understanding of mass in order to have a good understanding of the pre-lab. We can also get a good understanding of the temperature. We need to weight the flask multiple times and the density of water in order to get a precise number.
